referrals

Cygnnet Pindar House is our 22 bed Neuropsychiatric care and treatment service for men affected by acquired brain injuries. It is a safe and secure place to aid recovery as well as offering those diagnosed with a progressive neurological disease like Huntington's Disease, a caring and longer term placement to support and help manage the progression of their symptoms.

The hospital is a modern purpose-built facility, designed specifically to provide a clinically-led evidence-based neuropsychiatric pathway for individuals presenting with behaviours that challenge. Our focus is to create a therapeutic rich environment to engage the men in our care and offer them the opportunity to maximise their independence.

Male

18+ years

22 beds

Our in-house Neuropsychiatry interdisciplinary team are able to support those with complex physical health needs and we have bedrooms located on the ground floor for men with mobility impairments.

Our person-centred approach puts the individual at the centre of their treatment and discharge planning. The service offers a wide range of activities and facilities to promote independent function. Positive behaviour goals are focused on discharge planning to support service users to return to community living – either with support or independently.

I can't begin to tell you how fabulous you have been in supporting my husband and I over the last year.
