# Hyperacute Neuropsychiatric Rehabilitation Pathway

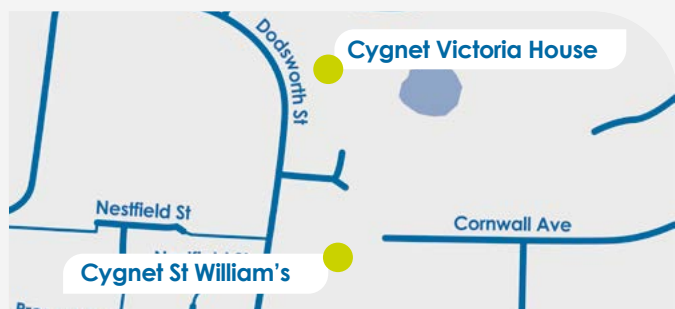

Good

NEW  
Accepting  
Referrals

Cygnet Victoria House combines their acute psychiatric expertise with the established neuropsychiatric rehabilitation expertise of **Cygnet St William's**, creating a unique and innovative pathway for men who find themselves in environments less conducive to recovery and stabilisation, or requiring a graded step through services from secure pathways.

Our Hyperacute Neuropsychiatric rehabilitation pathway provides an inpatient bespoke behaviour management/ Neuropsychiatric treatment assessment following an Acquired Brain Injury when presenting behaviours are at their most challenging.

The pathway prioritises the stabilisation of complex behaviours and risk reduction, offering a safe and therapeutic environment where individuals can work towards accessing a neuropsychiatric rehabilitation treatment pathway. We are uniquely equipped to support individuals to obtain rapid access to specialist neuropsychiatric assessment, risk formulation and behaviour management.

Each person in our care is supported by a comprehensive, resource-intensive interdisciplinary team, delivering expert neuropsychiatric oversight throughout their stay. Within 28 days, our clinicians will provide a report detailing recommendations for next steps and onward care.
